The Guide to the STAR TREK Galaxy

FILE 15 CARD 2

THE BORG AND THE FEDERATION

Mention of the awesomely powerful Borg strikes fear into the hearts of species across the Galaxy. The United Federation of Planets is one of the few organizations that has managed to successfully defend itself against the collective's malevolent incursions.

The race known as the **Borg** move through the Galaxy like a relentless storm leaving cataclysmic destruction in their wake, assimilating whole species, adding their victims' biological and technological diversity to their own. Many fall victim to the **collective**, and only a few manage to repel their assaults. Many races of the **United Federation of Planets** fortunately fall into the latter group.

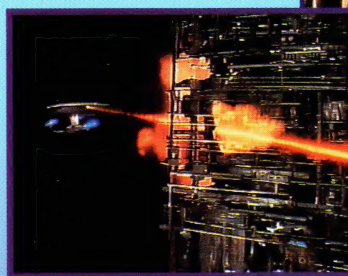

The Federation has some knowledge of the Borg via races such as the **El-Aurians**, whose homeworlds were assimilated, and through the 2355 scientific expedition mounted by exobiologists **Erin** and **Magnus Hansen**, but **Starfleet**'s first shocking encounter with the Borg comes in 2365, when the superbeing **Q** hurls the **U.S.S. Enterprise NCC-1701-D** through 7000 light years to **System J-25**.

The *Enterprise*'s first encounter with a **Borg cube** sees it outclassed at every turn. In light of this new threat, Starfleet develops a defense program to counteract any future Borg offensives.

In the early days of 2367, Starfleet mobilizes a taskforce of 40 ships at **Wolf 359** to intercept an intruding *Borg cube*. The fleet is utterly decimated, and vessels including the **Tolstoy**, **Kyushu**, **Saratoga**, and **Melbourne** are destroyed. The event is one of the darkest in Federation history, with more than 11000 lives lost.

Darkest hour

It takes the fleet more than a year to recover, and necessitates delicate handling of diplomatic incidents, such as **Captain Maxwell**'s intrusion into **Cardassian** space later that year, lest they drag the Federation into a war it cannot afford at this time.

The Borg adopt different strategies according to the race they are aiming to assimilate. The Federation, with its emphasis on free thinking and individuality, demands a single voice to facilitate assimilation; this is provided by the kidnapped **Captain Jean-Luc Picard**. Picard's vast knowledge of the Federation's defenses give the Borg a valuable tactical advantage.

Desperate action by the *Enterprise* crew prevents the assimilation of the human race in 2367, giving the Federation breathing space to harness its resources. By the time of the second major Borg

In 2365, the ENTERPRISE is thrown into the path of a BORG CUBE by Q. This encounter leads Starfleet to prepare for a possible hostile invasion.

BORG CUBES can take considerable punishment before being destroyed, making them formidable opponents.

The Borg believe that assimilation is the most efficient means of communication.

assault, in 2373, the assembled fleet is more able to put up a fight, with the new, battle-ready **Defiant**-class ships.

Past assimilation

In 2373, the Borg travel back in time in an attempt to undermine the very origins of the Federation: they try to prevent the pioneering warp flight made by **Zefram Cochrane** in 2063, which led to the historic first contact with the **Vulcans**. Fortunately, the Borg are again thwarted

by the *Enterprise* crew.

There have also been many other, less serious encounters between the collective and Starfleet. In 2368, the *Enterprise* finds a crashed **Borg scout ship** in the **Argolis Cluster**, and

PREPARING FOR BATTLE

Red alert

In response to the Borg threat, Starfleet initiates a research and development program to enhance the defensive capabilities of its ships and their crew. Some developments are instigated immediately – procedures to rotate shield and phaser frequencies, for example – but others, such as new weapons, are still on the drawing board when the Borg next attack.

Ships of the DEFIANT class, including the U.S.S. DEFIANT NX-74205 and the U.S.S. VALIANT NCC-74210, are the first Starfleet vessels specifically designed for war.

Starfleet's defense initiative against the Borg is overseen by the ambitious Lt. Commander Shelby.

▶ **Captain Picard** is assimilated by the Borg to be used as their conduit to the Federation. Years later, he still bears the psychological scars of his treacherous actions as *Locutus of Borg*.

The Guide to the STAR TREK Galaxy

FILE 15 CARD 2

THE BORG AND THE FEDERATION

GALAXY FACTS

- ▶ Starfleet rethinks its philosophy of space exploration due to the Borg threat, returning to starships without family accommodation, such as the *Intrepid* class *U.S.S. Voyager*.
- ▶ In an alternate reality witnessed by Worf in 2370, the Borg have overrun the Federation.

recovers an injured drone the crew nickname '**Hugh**.' Senior officers develop an invasive program based on a paradoxical geometric construct, hoping that Hugh might infect the collective, but they are ethically unable to justify this potential genocide. The fact that the Federation has not used such a weapon since highlights the philosophical differences between that organization and the Borg.

The remnants of Hugh's individuality, fostered by

Geordi La Forge and **Dr. Beverly Crusher**, nevertheless wreak havoc aboard his *cube*, resulting in a rogue group of Borg led by the android **Lore**. This band carries out attacks in Federation space in 2369.

The various Borg attacks take a terrible toll on the Federation. In addition to the ship losses, a number of settlements are destroyed, including **Ohniaka III** and **New Providence colony** on **Jouret V**. The removal of entire colonies

along the **Neutral Zone** in late 2364 is also later suspected to be the work of the Borg.

Collective scars

The human cost is even greater in terms of the dead, the assimilated, and those left behind to grieve. The collective has left an indelible mark on two of Starfleet's finest captains – Picard and **Benjamin Sisko**, the latter of whom loses his wife, **Jennifer**, in the Battle of Wolf 359. The

El-Aurian **Tolian Soran** is also driven insane by the assimilation of his family.

Clashes between the Borg collective and a Starfleet vessel also occur in the **Delta Quadrant**, as the ***U.S.S. Voyager NCC-74656*** continues its lonely journey back to the **Alpha Quadrant**. Its course takes it through Borg-occupied space, and involves an historic alliance between the two powers, hastily arranged to tackle incursions by **Species 8472**. Due to the unchanging nature of the collective, however, this treaty has no lasting effect. Something else that

Voyager pioneers in Federation-Borg understanding is the recovery of individuals from the collective. In 2373, the starship renders aid – albeit unwillingly – to a group of ex-drones cut off from the collective; six months later, the wheel comes full circle when the drone **Seven of Nine** is likewise disconnected, and begins the journey of self discovery back to humanity.

In another's shoes

In this way, the mortal enemies are conjoined in a manner that would not once have been thought possible, with the Federation coming to understand the Borg ethos, while some Borg drones rediscover the freedom of individuality.

The Borg believe that their mission is to improve the quality of life for every race in the Galaxy by giving them perfection and order, but the Federation has successfully resisted this dictate for more than a decade, proving that quality of life is very much an individual thing.

- ▶ **Seven of Nine** is assimilated at an early age and grows up within the Borg collective. After her connection to the Borg is severed, she struggles to find her humanity once again.

USING BORG TECHNOLOGY

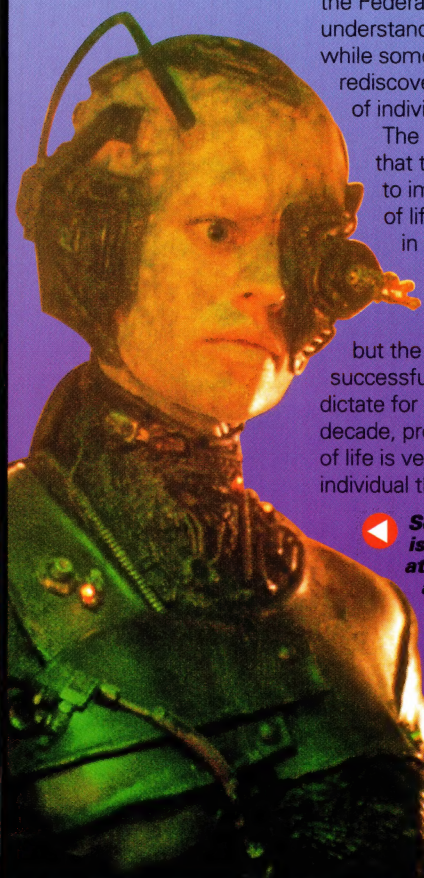

Collective progress

Conversely, and surprisingly, the implacable Borg collective also provides the Federation with a great deal of new technological advances. The threat of war galvanizes much invention and fast technological advancement, and Borg technology has also been taken and employed by Starfleet officers. The Borg means of creating a temporal vortex via the use of chronometric particles is discovered by the ***U.S.S. Enterprise NCC-1701-E*** when a *Borg cube* travels back in time to the 21st century. Transwarp conduit technology – a method that distorts space and allows travel at least 20 times faster than maximum warp speed – is utilized by the ***U.S.S. Enterprise NCC-1701-D*** in 2369, and the ***U.S.S. Voyager NCC-74656*** six years later. Use of Borg nanoprobe technology even permits *Voyager's* Talaxian crew member, **Neelix**, to be revived some 18 hours after his death.

- ▶ The ***U.S.S. VOYAGER's*** shuttlecraft, the **DELTA FLYER**, was designed for coping with Delta Quadrant missions. It incorporates a Borg-inspired weapons system thanks to former drone, **Seven of Nine**.

- ▶ **Neelix** is revived 18 hours after he is pronounced dead with the aid of Borg nanoprobe technology. He finds this experience hugely disturbing, however, and it destroys his faith in the Talaxian afterlife.

OTHER GROUPS
AND RACES

The Guide to the STAR TREK Galaxy

FILE 18 CARD 54

THE KOBLIAD

OTHER GROUPS
AND RACES

The humanoid, spacefaring Koblid are a dying culture. Their only hope of survival lies in finding supplies of deuridium, a substance that can stabilize their ailing cell structure.

The Koblid are a humanoid Alpha Quadrant race. They possess distinctive physical qualities that differentiate them from other such beings but, unlike most other species, the Koblids' healthy appearance belies the fact that they are a dying race.

Recognizing a Koblid is a task made simple by the prominent skull ridge that vertically bisects the center of their face. Unlike the deep skull ridges of the Klingons, the Koblids' single skull ridge is less prominent in appearance and somewhat smoother. Beginning at the nose,

the ridge runs up over the forehead before cutting slightly into the hairline, where it dips back down into the cranium. Smaller ridges run horizontally to the main skull line, though these are not as obvious at first sight, and there is also a slightly pronounced bone structure above the eyes. This area of the face is noticeable for the race's lack of eyebrows.

Similarities

In other aspects, the Koblid are remarkably similar to other humanoid races, with light, pinkish skin similar to that of Earth's Caucasians. They even share finer details such as

the presence of nails on the end of each finger tip.

Physically, the Koblid are an imposing race. When Koblid Security Officer Ty Kajada comes aboard station *Deep Space Nine* in 2369, her form-fitting uniform displays her trim, muscular physical form, and her hair is styled in a tight, functional way. The only visible concession that the businesslike Ty Kajada makes to style is the appearance of two strands of hair pointing forward to follow the curvature of her neck on either side.

Kajada's uniform is also an exercise in functionality. The two piece outfit, colored in a dark maroon

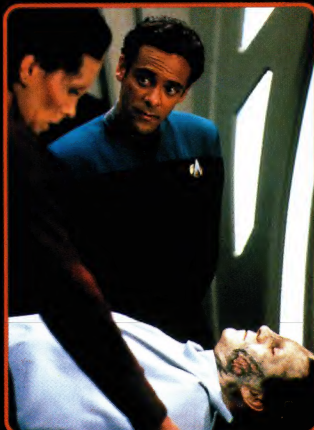

▲ The humanoid Koblid are characterized by their dominant skull ridges that bisect their foreheads.

KAJADA VS VANTIKA

Twenty-year pursuit

Vantika uses his microscopic generator technology in 2369, following his arrest. He starts a fire while in custody aboard Kajada's ship that results in his own body suffering severe respiratory failure. Moments before his death, however, Vantika manages to grasp Dr. Julian Bashir by the neck and successfully pass his consciousness into the human. Kajada suspects that her adversary is still alive and plotting to hijack a shipment of deuridium bound for *Deep Space Nine*. Before Vantika can complete his objective, however, Starfleet personnel discover his presence and determine a method of isolating the glial cells that carry his consciousness in Bashir's host brain. Using a medical transporter, Vantika's glial cells are beamed into a secure containment device, and Kajada uses her weapon to destroy it.

Race The Koblid
Species Humanoid **Quadrant** Alpha
Homeworld Close proximity to Bajor

Authorities Koblid security officers appear to be totally focused and dedicated to upholding law and order. Kajada, for example, pursues wanted criminal Rao Vantika for 20 years before his arrest.

Characteristics The Koblid are humanoid, and have raised cranial ridges.

Status The species is struggling to preserve their destabilizing cell structure with supplies of deuridium.

Starship Log STAR TREK: DEEP SPACE NINE 'The Passenger'

◀ Despite Dr. Bashir's validation of Vantika's death, Kajada remains skeptical. She insists on a DNA analysis to confirm the identity of the corpse.

▲ Rao Vantika takes over the mind and body of Julian Bashir and hijacks a deuridium transport. He displays a cold and ruthless nature and is even willing to sacrifice the lives of his crew in an attempt to escape.

STAR TREK:
DEEP SPACE NINE.....File 70

▼ *The Kobliad home planet is close to the Bajoran system, so the appearance of Kajada's police transport, the REYAB, within close proximity to DEEP SPACE NINE is of little surprise. The injured security officer is taken to the station's Infirmary.*

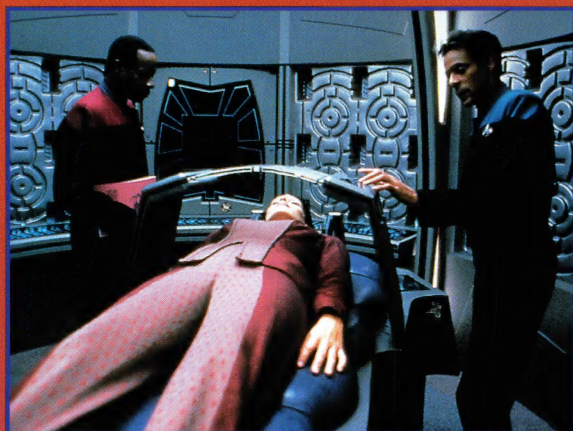

The Guide to the STAR TREK Galaxy

FILE 18

CARD 54

THE KOBLIAD

with a broad band of light purple running down the center, allows her a great degree of maneuverability and comfort. In keeping with the uniforms of other members of the Kobliad security forces, Kajada wears a belt with a holster in which she carries a phaser-style weapon.

Facing death

The Kobliad are a slowly failing race. The specific nature of their condition is not divulged, although it is known that they require **deuridium**, a substance that aids the stabilization of their cell structure in order to prolong their lifespan. Unfortunately, deuridium is

extremely rare, and even with the efforts of the **Federation** and the discovery of new deposits of the vitally needed substance on planets in the **Gamma Quadrant**, the Kobliad have failed in their efforts to procure enough to save the entire race.

Many Kobliad have attempted to garner deuridium through less conventional methods, often resorting to criminal means. One Kobliad by the name of **Rao Vantika** sacrificed a promising career as a scientist in order to obtain illegal supplies of the substance. He resorted to committing great horrors on the Kobliad homeworld,

among them the murder of his fellow citizens, in an effort to prolong his life.

The atrocities for which Vantika was responsible soon came to the attention of the efficient Kobliad security forces, who immediately put out a warrant for his arrest. Ty Kajada is the security officer assigned to track down the highly dangerous, but nevertheless inventive criminal – a task that takes her 20 years to accomplish. Over the course of this period, Vantika succeeds in evading Kajada by faking his own death numerous times. In light of this, it is little wonder that when Vantika appears to die in a fire aboard Kajada's ship, the security officer remains skeptical about the permanence of his death, and requests that the corpse be subjected to retinal imaging and DNA reference scans to confirm its identity.

Desperation

Vantika developed various advanced technologies while on the run from the Kobliad authorities, enabling him to remain one step ahead

of death. The most sophisticated of these technologies is, perhaps, a **microscopic generator** that he places beneath one of his finger nails. When his body comes close to dying, Vantika is able to use the generator to transfer his consciousness into a host body of a similar species simply by pressing his fingertip against their skin. **Dr. Julian Bashir** of *Deep Space Nine* is the unlucky victim.

The case of the Kobliad proves that some people will stop at nothing to survive. Equally, the exhaustive efforts of Officer Kajada demonstrates that there are those who will go to any lengths to halt criminal activities.

GALAXY FACTS

▶ It is not unusual for alien security officers to sacrifice a great deal of time in the pursuit of criminals. Commissioner Bele from the planet Cheron pursued the alleged criminal Lokai for 50000 years.

▶ Vulcans are also able to transfer their consciousness into the minds of others, as demonstrated by Captain Spock when he performs a mind-meld on Dr. Leonard McCoy prior to his death aboard the **U.S.S. Enterprise NCC-1701**.

▼ *The Kobliads' highly dedicated security force includes agents such as Officer Ty Kajada, who has been in pursuit of the same felon for 20 years.*

LIFE AFTER DEATH

Transferral of consciousness

Rao Vantika demonstrates the rare ability to displace his synaptic pattern, or consciousness, into a host body at the point of death. In the Alpha Quadrant, Dr. Bashir observes that it has never been achieved by non-Vulcans. In the Delta Quadrant, however, the crew of the **U.S.S. Voyager NCC-74656** encounter a noncorporeal alien, known only as Steth, who switches its consciousness with the mind of Lt. Tom Paris.

▶ *Jadzia Dax discovers a microscopic generator beneath Vantika's finger nail and determines the method of isolating the glial cells that host his consciousness in Bashir's brain.*

▶ *Rao Vantika is a desperate and brilliant criminal mind who finds a way to defeat death by transferring his consciousness into the brain of a host body, where eventually his personality becomes dominant.*

▼ *In the Delta Quadrant, Lt. Tom Paris falls victim to a body stealing alien that swaps their consciousnesses and assumes the lieutenant's identity on board the **U.S.S. VOYAGER**.*

FILE 22 U.S.S. ENTERPRISE NCC-1701-A

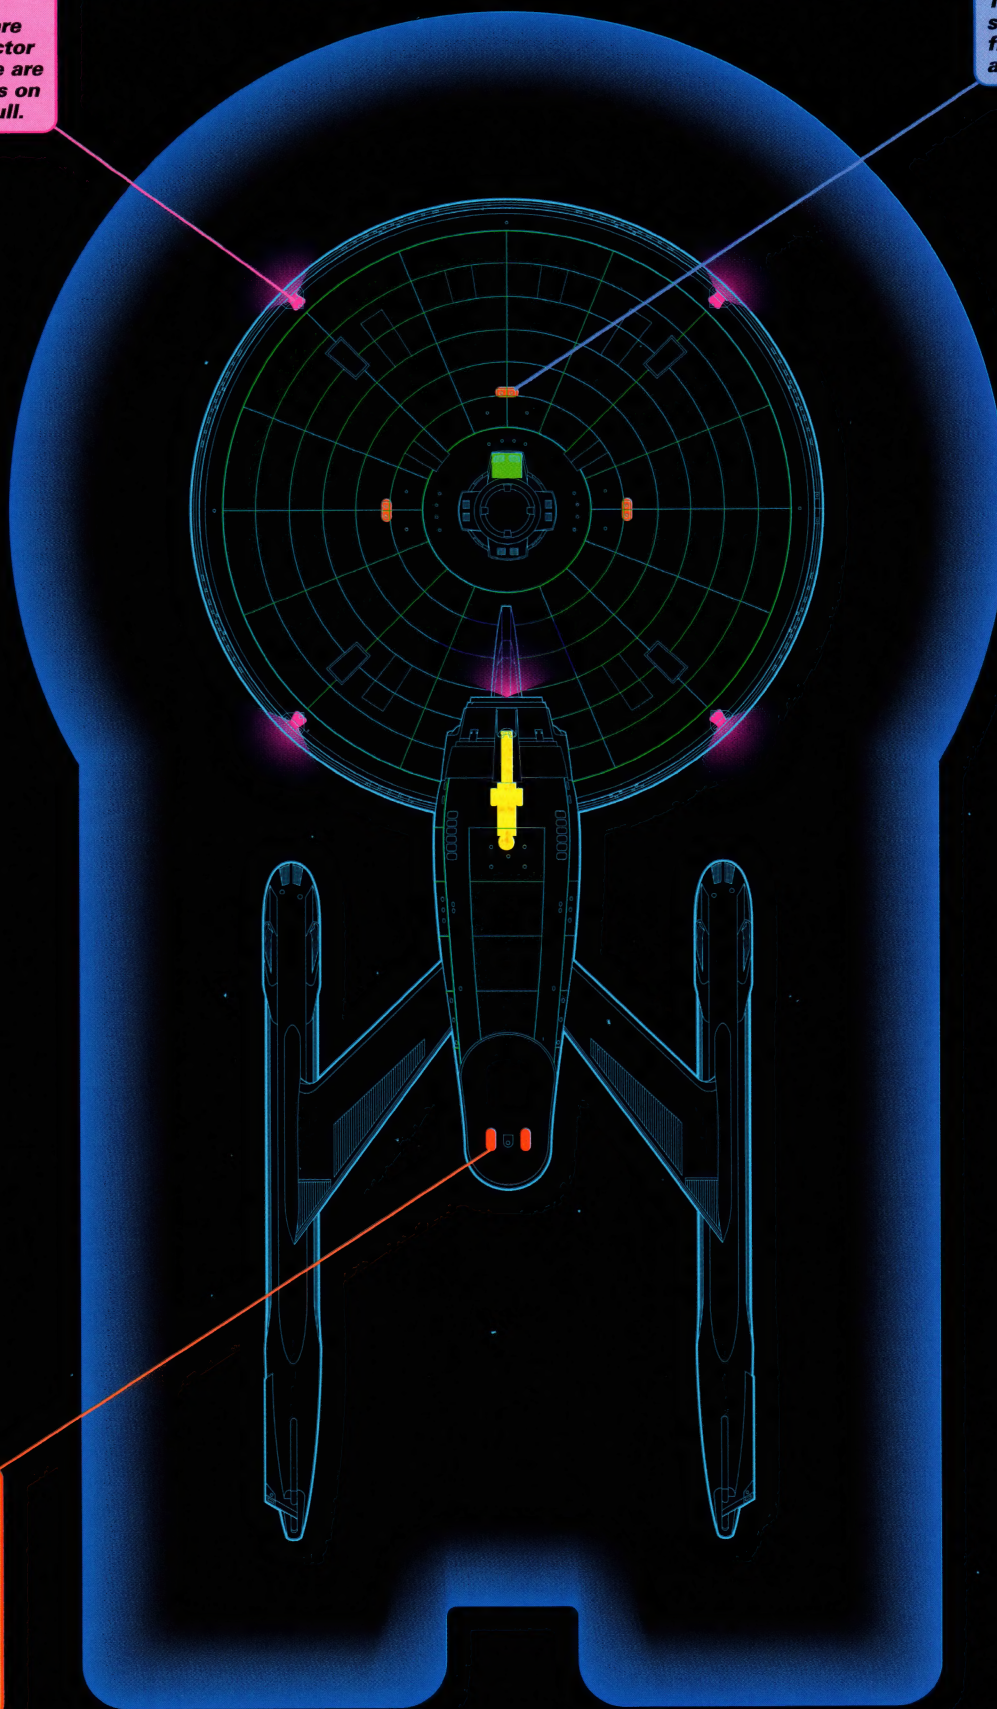

U.S.S. ENTERPRISE NCC-1701-A

SYSTEM LOCATIONS

WEAPONS AND DEFENSIVE SYSTEMS

The main saucer and engineering section are imbedded with deflector shield emitters. There are five such components on the saucer's dorsal hull.

The phaser strip on the saucer section can fire from forward, port, and starboard arrays.

The photon torpedo launcher is located at the rear of the ship. Unlike the previous vessel to bear the name, the U.S.S. ENTERPRISE NCC-1701-A can also fire phasers from the rear of the ship.

U.S.S. ENTERPRISE NCC-1701-A

SYSTEM LOCATIONS

WEAPONS AND DEFENSIVE SYSTEMS

Equipment such as phaser arrays, photon torpedoes, and deflectors act as the swords and shields of starships such as the *U.S.S. Enterprise NCC-1701-A*.

The *Constitution*-class *U.S.S. Enterprise NCC-1701-A* is a formidable starship equipped with weapons and defensive systems that rival those of any ship in *Starfleet*. By the 2290's, the ship is considered to be outdated, but it is more than capable of holding its own in battle with many opponents, including a *Klingon Bird-of-Prey*. Rushed into service in 2287, the ship experiences several technical glitches before leaving the docking bay. Many of its primary and secondary systems, including the **transporters**, red alert status monitors, and several sets of **turbolift** doors do not function properly upon initial launch, but luckily the weapons and defenses function adequately when called upon to do so.

Primary and secondary weapons

Phaser banks are located in both the saucer and engineering sections, allowing for targeting of vessels off the ship's bow or stern. The three primary phaser arrays are contained in the saucer section, located at equidistant positions from each other in a semicircular pattern. The effective tactical range of the ship's phasers is approximately 300,000 kilometers; this is consistent with its predecessor, the refit *U.S.S. Enterprise NCC-1701*.

Photon torpedo bays are located above the main deflector dish at the front of the engineering hull. This location is especially useful for crew members if photon torpedoes need to be modified before they are fired. Such a modification takes place in 2293, when **Captain James T. Kirk** orders **Captain Spock** and **Dr. McCoy** to refit a photon torpedo with equipment that would normally be used to catalog a gaseous anomaly. This occurs while the ship is under attack from a cloaked *Klingon Bird-of-Prey* during the **Khitomer peace conference**; Kirk's intent is to highlight the location of the cloaked ship.

The *Enterprise* of the 2290's carries 78 photon torpedoes, a full complement for a *Constitution*-class starship. Computer data banks record the firing of the powerful and destructive torpedoes, and an inventory program keeps track of the number of torpedoes remaining after each one has been launched. The ship's phaser banks and photon torpedoes are capable of inflicting heavy damage upon, or even destroying, a *Bird-of-Prey* or a *Romulan Warbird*.

Shield strength is another prominent feature of the *Enterprise*, though transporters are inactive, weapons cannot be fired, and shuttlecraft cannot be launched, while the shields are raised. The process of lowering shields to allow one of these activities to take place, and then raising them again, takes 15.5 seconds. The shields are capable of

withstanding several bursts of Klingon **disruptor** fire, although this drains them; however, even when the shields are lowered and the hull has been breached by disruptor fire, the ship is still capable of functioning.

The starship has deflector grids in both the engineering and saucer sections, with the one in engineering on the port side and the other on the stern of the saucer. The overall strength of the grid appears to have been increased in the *U.S.S. Enterprise NCC-1701-A*, as the new ship breaks through the Great Barrier in 2287 when hijacked by Spock's renegade half-brother, **Sybok**. Previously, this powerful energy field at the center of the Galaxy was believed to be impenetrable. The *Enterprise* also contains a number of internal defense systems that differ from previous models.

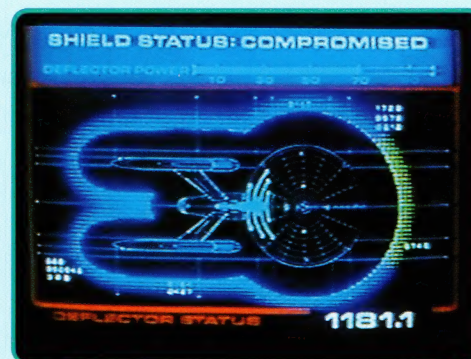

The ship makes extensive use of tactical scans that are conveyed to the bridge. These are capable of detecting the positions of enemy ships, and of making recommendations for the activation of different defense systems. Additionally, tactical scans register when an existing enemy ship's cloaking device has been activated, though they are unable to track a cloaked ship thereafter.

Another internal defensive scheme is the ship's prisoner holding area, or brig. The new brig is considered escape-proof, having been tested by Spock at the request of *Starfleet* designers. **Captain Montgomery Scott** disproves this notion, by setting off an explosion that blasts through one of the brig walls.

A final safeguard aboard the later version *Constitution*-class *Enterprise* protects against the unauthorized firing of a hand phaser. Anyone attempting to initiate weapons fire on board is immediately detected by security teams and faces a multitude of internal alarms. The phaser blast itself is rendered useless but, as Spock discovers in 2293, a phaser set on stun can be fired at close range – to lethal effects – without setting off the alarm.

Unlike earlier ships in its class, the *U.S.S. ENTERPRISE NCC-1701-A* is equipped with aft torpedo launchers.

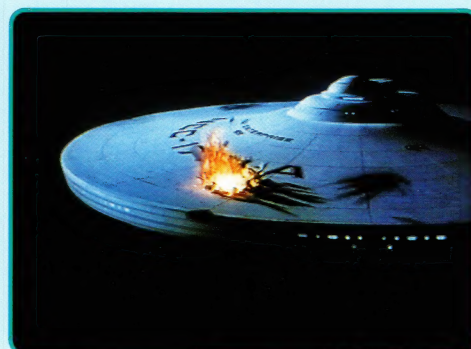

Monitor screens on the bridge of the *U.S.S. ENTERPRISE* show the strength and disposition of the starship's shields.

In the event that a red alert is declared, displays throughout the ship warn the crew that battle stations drills are in effect.

The starship is equipped with numerous photon torpedo launcher mechanisms. These arm and ready warheads for firing.

Enemy fire can sometimes penetrate shielding, and breaches may result in some sections of the hull being destroyed.

O'Brien on the U.S.S. ENTERPRISE

Miles O'Brien joins the crew of the *U.S.S. Enterprise NCC-1701-D* in 2364, initially serving on the bridge. He finds success in his career and his private life: his experience with transporter systems earns him a promotion to transporter chief, and he also meets his future wife while serving on board the starship.

After serving on board the *U.S.S. Rutledge NCC-57925* as a tactical officer for 17 years, Miles Edward O'Brien is assigned to the crew of the newly commissioned *U.S.S. Enterprise NCC-1701-D* in 2364. He is initially part of the bridge personnel, but soon earns a promotion to the post of the *Enterprise's* transporter chief due to his experience in working with these systems.

Responsibilities

In this new role, O'Brien is responsible for the day-to-day operation and maintenance of the ship's transporter systems. His direct supervisor is Chief Engineer Geordi La Forge, but La Forge often defers to O'Brien when it comes to specifics. The chief

delegates many duties to his staff, but he takes it upon himself to oversee many of the prestigious transports involving important, high-ranking officers and diplomats. Nevertheless, O'Brien can still sometimes be seen on the bridge, manning one of the engineering consoles.

Off-duty pursuits

When off-duty, Chief O'Brien keeps busy with a wide variety of activities. He is fond of strenuous holodeck simulations, and can often go kayaking in a holographic river. This activity can sometimes prove risky, as in 2366, when O'Brien dislocates his left shoulder. Luckily, the injury is healed by a visiting Zalkonian.

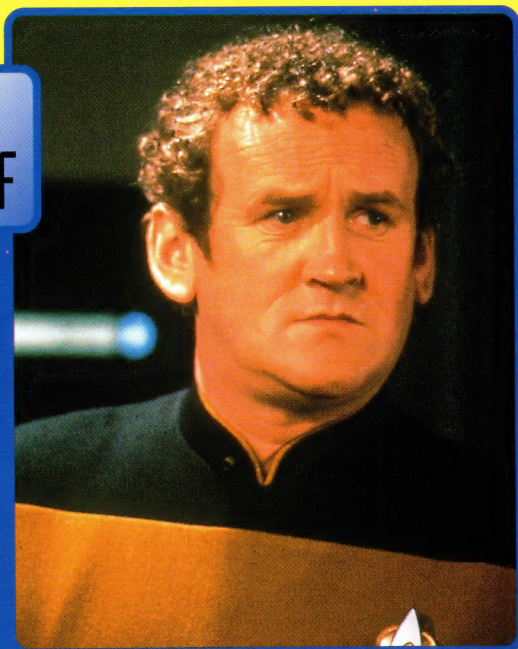

The chief's other unusual hobbies include the care of his pet Lycosian tarantula,

PROFILE ON A TRANSPORTER CHIEF

PREVIOUS POSTING: Seventeen years of service aboard the *U.S.S. Rutledge* as a tactical officer.

PROMOTION: After joining the *U.S.S. Enterprise* O'Brien is soon promoted from bridge officer to transporter chief.

SIGNIFICANT EVENTS: The chief is introduced to Keiko Ishikawa while on board the *Enterprise*. They marry in 2367 and their eldest child, Molly, is born during a shipwide disaster. O'Brien leaves the *Enterprise* in 2369, when his hard work and good service earn him another promotion.

▲ O'Brien proves to be a capable and versatile officer during his years of service to Starfleet. He moves from a post as a tactical officer aboard the *U.S.S. RUTLEDGE* to bridge officer and later transporter chief on the *GALAXY-class U.S.S. ENTERPRISE*.

O'BRIEN ON THE BRIDGE

★ New start

O'Brien first serves aboard the *U.S.S. ENTERPRISE* as a bridge officer.

★ Responsibilities

O'Brien is responsible for transports, which he can control from the bridge.

Christina, acquired on Titus IV. O'Brien uses his pet to break the ice with a somewhat wary Lt. Reg Barclay in 2369, after learning that his position as transporter chief has led the transporter-phobic lieutenant to avoid him.

One of the most significant events during O'Brien's time on the *Enterprise* is his introduction to his future wife, Starfleet botanist Keiko Ishikawa, by Data. After seeing her a number

★ Mutual respect

Chief O'Brien and Geordi La Forge have a good working relationship. The chief engineer often defers to the transporter chief when it comes to specific transporter operations.

O'Brien on the U.S.S. ENTERPRISE

★ Family threat

In 2368, O'Brien threatens his wife and child while controlled by the Ux-Mal.

of times, Miles begins a relationship with Keiko. He spends a great deal of time visiting her in the botany laboratory and arboretum.

In 2367, Miles and Keiko marry in a charming wedding ceremony that combines Irish and Japanese traditions, under the auspices of **Captain Jean-Luc Picard**. This is held in **Ten-Forward** aboard the *Enterprise*, with all their colleagues and friends in attendance. As Data introduced the happy couple, he is

asked to serve as father of the bride. The android officer takes this duty very seriously and persuades **Dr. Crusher** to give him dancing lessons in preparation for the O'Briens' wedding.

A year later, Miles O'Brien becomes a father for the first time. **Molly O'Brien** is born during a shipwide disaster; at the time, the transporter chief is separated from his wife, leaving **Lt. Worf** to deliver the baby when adequate medical assistance is not available. The **Klingon** has only previously been trained to assist in a simulated human birthing situation, but nevertheless manages to successfully deliver the chief's daughter.

Old friends

In 2367, O'Brien plays a key but uncomfortable role in tracking down and bringing to justice his former commander from the *U.S.S. Rutledge*, **Captain Benjamin Maxwell**, who is engaging in a personal vendetta against **Cardassian** outposts and vessels. The captain believes that the Cardassians are planning a new assault on the **Federation**. Having fought in the Cardassian wars aboard Maxwell's ship, O'Brien has mixed emotions about stopping his former commander, and he resents the presence of

Cardassians aboard the *Enterprise*. The chief is still bitter about the Cardassian incident at **Setlik III**, which he felt turned him into a killer. He is initially resistant when the Cardassian **Glinn Daro** makes overtures of friendship, but later learns to overcome his prejudice.

Puppet criminal

In 2368, O'Brien becomes an unwilling pawn in an attempted takeover of the *U.S.S. Enterprise* when his body is possessed by the consciousness of an **Ux-Mal** criminal imprisoned on **Mab-Bu VI**. A shuttlecraft crashes while answering a distress call from the planet, and O'Brien risks his life to beam down and save the crew. Upon their safe return to the ship, O'Brien, **Deanna Troi**, and Data begin exhibiting strange behavior, and then attempt to take over the

ship by holding hostages, among them are Keiko and Molly, in **Ten-Forward**. Eventually, the criminals are exorcised from the bodies of the three *Enterprise* crew members.

O'Brien's tour of duty aboard the *U.S.S. Enterprise NCC-1701-D* comes to a conclusion in 2369 when he is transferred to the space station **Deep Space Nine** in the **Bajor** sector and promoted to chief of operations. O'Brien, Keiko, and Molly together leave their home of the last six years with mixed emotions, the loss of old friends tempered by the excitement of a new post on the **Federation** frontier.

★ Starship wedding

Thanks to his android colleague, **Data**, O'Brien meets – and later marries – **Keiko Ishikawa** on board the *ENTERPRISE*.

"It is my honor to unite you, Keiko Ishikawa, and you Miles Edward O'Brien together in matrimony."

— Captain Picard conducts the O'Briens' wedding ceremony.

★ Unwitting pawn

The chief's knowledge of the *ENTERPRISE*'s operations proves useful to the criminal Ux-Mal.

MINIATURE EMERGENCY

Child bride

In 2369, O'Brien is faced with a strange incident on board the *U.S.S. Enterprise* – his wife Keiko is accidentally transformed into a child, along with **Captain Picard**, **Guinan**, and **Ensign Ro Laren**, when their shuttle passes through an energy field. The chief must confront the awful possibility that he could now be married to a 12-year-old girl.

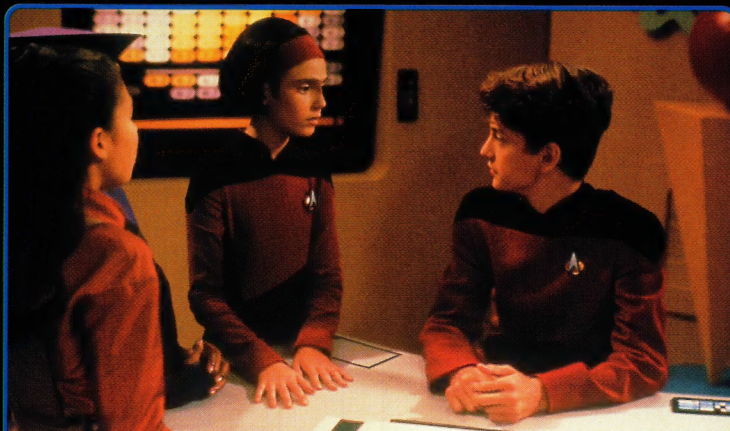

During the chief's personal emergency, the *Enterprise* is also hijacked by a group of **Ferengi** pirates. The child officers manage to overcome the **Ferengi** and soon after Keiko and the rest of the group are thankfully restored to their proper ages using the transporter.

▶ Childhood revisited

In 2369, O'Brien's wife, along with **Captain Picard**, **Guinan**, and **Ensign Ro** are transformed into children by an energy field.

▼ Dilemma

The transformed *ENTERPRISE* officers must face the possibility that they may have to grow up all over again.

Data and the Federation's Enemies

As a full-time **Starfleet** officer serving aboard the *U.S.S. Enterprise NCC-1701-D*, the android **Data** is sworn to uphold the ideals of the **United Federation of Planets**. It is his duty to defend its borders and citizens from attack by hostile powers, no matter where they come from or what they are.

The android **Lt. Commander Data** has often been called upon to perform his duty to the **United Federation of Planets** by defending it from the numerous threats and enemies that might challenge its liberties and freedom. As one might expect from a synthetic life form, Data has worked tirelessly for **Starfleet**, serving as a line officer aboard the starship *U.S.S. Trieste NCC-37124* and later aboard the *U.S.S. Enterprise NCC-1701-D* and *NCC-1701-E*.

Alien foes

The many challenges to the peace and harmony of the Federation come in several different forms – some are aggressively adversarial races such as

the **Romulans**, the **Borg**, and the **Cardassians**, while others are individual beings such as the omnipotent **Q** and the alien **Crystalline Entity**. The latter is, in fact, the first threat to life that Data ever encounters, shortly after his construction in 2335, six years before he joins **Starfleet**.

Crystalline danger

At this time, Data was in a deactivated state pending assimilation of new programming taken from the colonist population of **Omicron Theta**, and as such was the sole survivor of the entity's first attack. The massive, snowflake-shaped being goes on to attack 12 more worlds over the intervening years, including planet **Forlat III**.

Data twice more encounters this destructive

ENEMY ENCOUNTERS

ENCOUNTER: 2364, Deneb IV: the omnipotent being known as **Q**.

ENCOUNTER: 2364, Omicron Theta: android 'brother' **Lore**.

ENCOUNTER: 2364, Tarod IX: the Romulan Star Empire.

ENCOUNTER: 2365, System J-25: the Borg.

ENCOUNTER: 2367, Sector 21503: the Cardassian Union.

ENCOUNTER: 2368, Melona IV colony: the Crystalline Entity.

ENCOUNTER: 2369, 19th-century Earth and Devidia II: the Devidians.

ENCOUNTER: 2373, in Earth orbit: the Borg.

ENCOUNTER: 2375, the Ba'ku homeworld: the Son'a.

▲ The United Federation of Planets is continually under threat from such dangerous neighbours as the Cardassians and the Romulans, but the android Data is always ready to risk his existence to defend Starfleet.

FOES FROM THE PAST

★ Escape from the Borg

After his capture and conversion at the hands of the Borg, Captain Jean-Luc Picard is rescued by Data and Worf.

and dangerous life form. The first reunion occurs in 2364, when his android 'brother' **Lore** makes contact with the creature;

the second is four years later, during a survey by the *Enterprise* crew of the planet **Melona IV**. The Crystalline Entity is responsible for several

deaths at this time. Adhering to the peaceful tenets of the Federation, however, Data and the *Enterprise* crew attempt to make contact with the creature, through the use of focused **graviton pulses**, in order to convince the entity to stop the attack before they are forced to destroy it. This laudable attempt at reconciliation is thwarted by the actions of **Dr. Kila Marr**, the mother of **Raymond Marr**, one of the colonists killed by the entity during its original attack on Omicron Theta.

Data, along with his fellow crewmates aboard the *Enterprise*, has also found himself at the mercy of the omnipotent life form known as **Q** on a number of

★ Crystal death

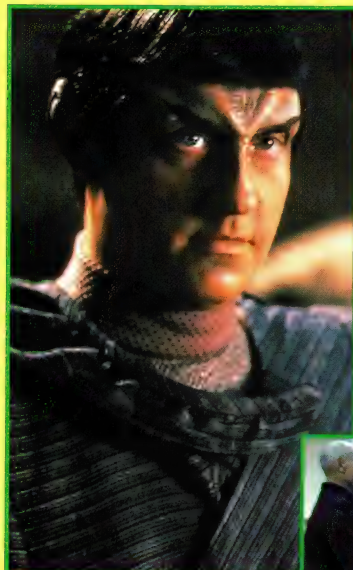

The Crystalline Entity was responsible for the deaths of everyone on Data's home colony.

★ Evil twin

Data's violent and manic 'brother,' Lore, was created first, but lacks Data's morality and ethics.

Data and the Federation's Enemies

★ Undercover mission

In 2367, Data undergoes surgical alteration in order to take part in an undercover mission to the Romulan homeworld.

occasions. The android's first encounter with Q is at the very start of the *U.S.S. Enterprise's* mission in 2364; Q abducts members of the *Enterprise* bridge crew, including Data, to take part in a recreation of a post-atomic horror courtroom. Unfettered by human emotional responses such as fear and apprehension, Data confronts Q when the being challenges them with legal technicalities. Data's accurate memory enables him to hold Q to his own rules and allows **Captain Jean-Luc Picard** a chance at thwarting their captor.

Over the new year of 2368-9, Data becomes personally involved in a complex plot by a race of alien invaders from **Devidia II**; using time travel technologies to generate an artificial temporal rift, the **Devidians** have apparently been traveling to San Francisco, Earth, in the 1890's.

Mystery revealed

Among the clues to unraveling this mystery is Data's severed head, which apparently has been buried under the city for centuries. When the android investigates the Devidian homeworld, he is catapulted into the past, where the aliens are at work harvesting the life energy of dying cholera victims for their own sustenance. The android exposes the Devidian operation, and is rescued by a team from the *Enterprise*.

Some threats to the security of the Federation have seen the

★ Confrontation

Data and Picard rescue Ambassador Spock from the clutches of a Romulan agent, Commander Sela.

android go to war against the enemy. During the destructive **Klingon civil war** of late 2367, Data is given temporary command of the starship ***U.S.S. Sutherland NCC-72015***. As part of a blockade fleet, commanded by Captain Picard aboard the *Enterprise*, Data orders the use of a **tachyon detection grid** to waylay Romulan supply ships under the control of **Sela**. Data is again faced with Sela's cunning machinations some months later, when he and Captain Picard take part in a covert mission on **Romulus** to discover the whereabouts of **Vulcan Ambassador Spock**.

★ Into the past

After running afoul of the Devidians, Data is thrown back into the past, to Earth's 19th century.

The Romulan officer's plans to lead a covert invasion force to Vulcan are frustrated when Data, Spock, and Picard work together to reveal the invaders.

Data versus the Borg

The most personal and insidious threat to the Federation that Data has faced has come from the technologically augmented species known as the Borg. In 2365, Data is among the first Starfleet officers

to confront the Borg face to face, during an away team mission to a **Borg cube**. When the aliens reach Earth in early 2367, Data is forced to directly link his positronic brain with the **Borg collective** consciousness via the mind of **Locutus** – the assimilated Captain Picard. Data's direct influence on the Borg and Picard's strength of will, defeats the machinations of the assimilators on this occasion. In 2369, Data again encounters Borg interested in him, in the ruins of a Starfleet facility on **Ohniaka III**. These Borg drones are cut off from the collective and follow the will of a being they call **'The One'** – otherwise known as **Lore**, another android built by Data's creator **Dr. Noonien Soong**. Lore attempts to bring Data over to his side, but the android shrugs off his brother's mind control and manages to disassemble his sibling.

Data's contact with the collective is apparently registered by the **Borg Queen**, however, deep in the **Delta Quadrant**. When a temporal attack on Earth is attempted in 2373, her desire to convert the android to the Borg cause is clear, but he manages to resist her attempts to turn him against his Starfleet colleagues.

Data may be a machine, but his strength of personality makes him a force to be reckoned with by any potential foe.

"In the game of military brinkmanship, individual physical prowess is less important ..." — Data to Worf

DATA AND Q

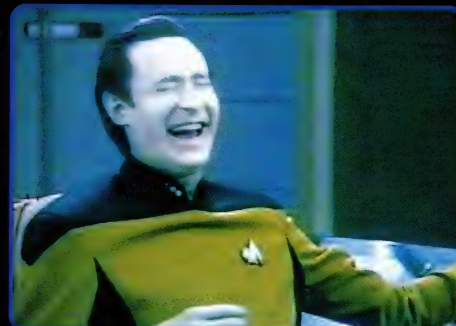

An omnipotent foe

A capricious and dangerous being, the life form known as Q dogs Data and the crew of the *U.S.S. Enterprise NCC-1701-D* during the ship's continuing missions. They first meet near Farpoint Station in 2364, and Q returns later that same year to offer the crew their hearts desires. For Data, this is transformation from a machine into a flesh and blood human, the ultimate expression of his desire to be more like his human crewmates. The android refuses the alien's offer, however, and Q becomes fascinated by the artificial man. Two years later, he grants Data a moment of genuine emotion as a gift for saving his life, and the android gives out a brief but hearty laugh.

▶ What's so funny?

Data cannot experience human emotion because of his android nature, but, after rescuing Q from the Calamarain, the superbeing uses his powers to grant Data a momentary burst of human happiness.

◀ A life saved

Banished from the Q Continuum in 2366, the being Q comes to the ENTERPRISE crew for help; Data is assigned by Captain Picard to watch over him, and risks his life to save the alien by blocking an electrical shock intended for him.

Dr. Tristan Adams

Dr. Tristan Adams is renowned as a humanitarian scientist dedicated to the treatment of the criminally insane, but he employs ruthless methods to test his radical theories.

MEDICAL FACILITIES.....File 65
 STAR TREK:
 The Original Series.....File 68

Despite a Galaxy-wide reputation as a visionary penal rehabilitation reformer, **Dr. Tristan Adams** hides a secret self that is as dark as any of the inmates entrusted to his care. His theories have revolutionized the **Federation's** treatment of criminals, but his actual practices are very different from the humane ideals that he publicly espouses.

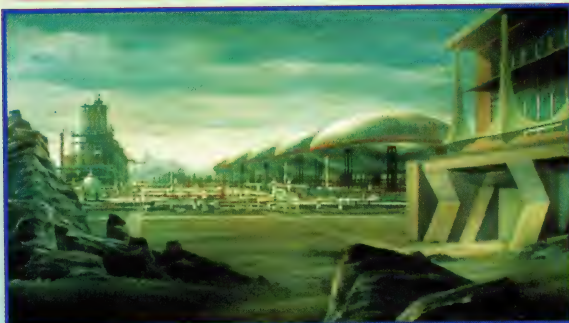

Visitors to the **Tantalus V** penal colony where Adams is assigned meet a genial, dedicated man who has spent 20 years turning the "cages" of the past into

clean, decent hospitals for the treatment of sick minds. Indeed, observers have compared the penal colonies that follow his methods to holiday resorts rather than prisons.

A facade of kindness

The doctor's academic credentials are impeccable, and his sense of humor, sharp wit, and knowledge of his field are all evident. Adams's personal space is decorated with beautiful artwork and sculpture, flowering plants, and elegant glassware. He speaks convincingly of love, warmth, and healing, and

PIONEERING PRISONS

★ Tantalus V

The isolated prison colony on **Tantalus V** is named after a mythic Greek king who was sent to Hades.

★ Brainwashed

Dr. Adams proudly shows off **Lethe**, one of his "successes." The former **Tantalus V** inmate is now a therapist; her name means "forgetfulness."

hopes that his research will help the few "incorrigibles" left in the Galaxy.

What visitors may not see, however, is that behind the security screens and

the carefully cultivated facade, Dr. Adams presides over experiments and treatments that destroy rather than heal. He proudly shows off **Lethe**, a woman once committed to Tantalus as a prisoner, but who now works as one of his therapists. The lack of emotion in her voice and the blankness on her face hint at Adam's secret treatments.

Abuse of power

As Tantalus V receives few visitors, Adams is able to exercise unquestioned control over his small empire until **Dr. Simon Van Gelder** is assigned there as a director. There are other therapists working at the colony, but many of them are like Lethe – obedient mental slaves of the doctor. The presence of a potential equal threatens Dr. Adams, and he takes steps to eliminate the danger.

★ Cordial meeting

At first, Dr. Adams appears affable enough when meeting **Captain Kirk** and **Dr. Helen Noel**, but his outward manner belies his more sinister motives and his use of unauthorized treatments.

PROFILE OF EVIL

NAME: Doctor Tristan Adams

LIFE FORM: Human

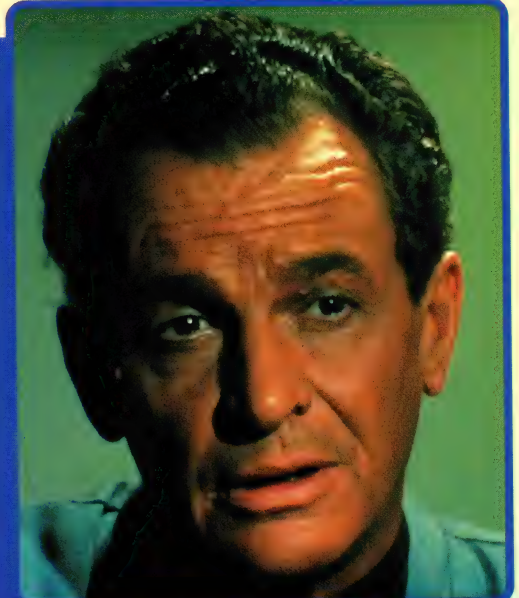

BORN: Unknown, circa early 2200's.

OCCUPATION: Criminal psychologist. In the 2260's, Adams is stationed at the **Tantalus V** penal colony.

STATUS: Deceased, 2266. Adams is killed after a terminal exposure to the neural neutralizer device at the **Tantalus V** penal colony.

HISTORY: A noted expert on the human mind and neurological processes, Adams's intellect hides a callous disregard for life.

FIRST SEEN: "Dagger of the Mind" [TOS]

▲ Outwardly, Dr. Tristan Adams appears to be a leading reformer, but in fact he is bereft of morals, medical ethics, and conscience.

One of the treatment methods that Adams has at his disposal is equally useful as a weapon. The **neural neutralizer**, which he publicly dismisses as little more than an electronic tranquilizer for difficult cases, actually drains the victim's mind of its own thoughts and makes it possible for suggestions and memories to be implanted. At stronger levels, the mind can be drained so deeply that the person under the beam becomes desperately empty and vulnerable, often leading to outright insanity. Adams enjoys the power the device gives him.

He uses the neutralizer on Van Gelder, and later brags that at one point his colleague was on his hands and knees, sobbing. The treatment is continued until Van Gelder is left insane and violent. Adams thus turns a potential threat to

Dr. Tristan Adams

★ Torture chamber

At the center of Adams's evil experiments is the treatment chair, which strips its victims of their own thoughts.

his command of Tantalus into another mindless slave under his control.

Van Gelder manages to escape during a routine visit by the **U.S.S. Enterprise NCC-1701**. Adams offers to let the ship take the escapee to a better facility, knowing full well that no such place exists, and that Van Gelder will never be cured enough for the truth to be revealed. He welcomes the arrival of **Captain James T.**

★ Obsession

Kirk falls victim to the doctor's cruel practice. Adams plants an obsession for Helen Noel into the captain's mind.

Kirk and Dr. Helen Noel – the *Enterprise's* psychiatric expert – onto the colony and seems open to their investigation. As the captain's admiration turns to suspicion, however, Dr. Adams begins to feel threatened again.

Battle of wills

Kirk and Noel discover the true power of the neural neutralizer, but Adams takes action and implants an obsession for Noel in Kirk's

mind. His efforts to control the captain ultimately fails, as Kirk physically overcomes the doctor and places him in the chair. The colony's power supply is disrupted when Noel turns off the security field to admit a rescue party from the *Enterprise*, but as soon as it is

★ Lonely death

Justice is finally served when Dr. Adams is killed by the horrors of his own treatment room. He dies of sheer loneliness.

restored the neural neutralizer is reactivated. Still strapped in the chair where Kirk left him, Adams is exposed to the full force of the beam. His mind is wiped blank, and without even his own thoughts for company, he dies as a result of extreme loneliness.

"Power over minds . . . and thus power over everything that counts."

— Dr. Adams to Kirk

A TORTURED SOUL

On the edge of sanity

Dr. Simon Van Gelder is assigned as a director of the Tantalus V penal colony, working with Dr. Tristan Adams, but within six months of his arrival there, he is no longer on the staff – he is a violent inmate. The cause of his insanity is the colony's neural neutralizer. Adams claims that Van Gelder stubbornly used the machine at full power unsupervised, but the truth is that Adams himself deliberately induced Van Gelder's state. Even this mistreatment, however, fails to conquer Van Gelder. When the *U.S.S. Enterprise* arrives at Tantalus, Van Gelder escapes. He is cunning enough to overpower a transporter technician and make his way to the bridge. He fails to stop Captain Kirk returning to Tantalus, but later manages to convince Dr. McCoy and Commander Spock that his version of events may be the correct one. His internal fight against the mental constraints imposed by the neutralizer is heroic, and Spock mind-melds with him to establish the truth. After Dr. Adams's death, Van Gelder's sanity is restored and he assumes full command of the colony. His first act is to destroy the neutralizer; the potential to abuse the device is too high. Tantalus V is fortunate to now be in the hands of someone who combines morality with unquestioned ability.

★ Open your mind

Spock realizes that the only way to be sure of Van Gelder's claims is to attempt a Vulcan mind-meld and sift through his memories.

★ The torments of Tantalus

Driven insane by Adams's deadly machine, Van Gelder is wracked with pain as he tries to fight the mind control.

★ At gunpoint

Van Gelder risks his life to confront Captain Kirk on the bridge. He is armed with a phaser, and is intent on stopping Kirk.

★ Escape route

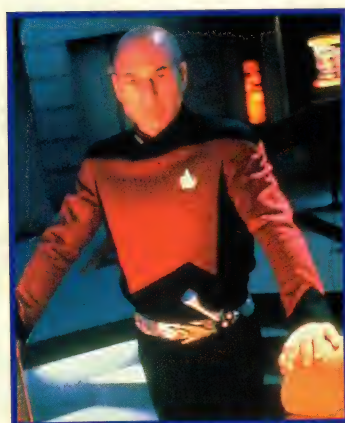

Van Gelder gets aboard the U.S.S. ENTERPRISE by hiding in a container of research material bound for Earth's Institute of Penology in Stockholm; he intends to warn the crew of Adams's evil experiments.

Starfleet Uniforms: Alternate Timeline 2360's

In an alternate version of the year 2366, created by a temporal distortion, the basic uniform design is still considered suitable for use during a period of intense conflict between the **Federation** and the **Klingon Empire**.

When a temporal rift in space is encountered by the **U.S.S. Enterprise NCC-1701-C** in 2344, a crucial moment in **Federation** history is rewritten. The starship is defending the **Klingon** outpost of **Narendra III** from three **Romulan Warbirds** when it is thrown 20 years into the future. History is changed: the colony on Narendra III is destroyed and a new timeline is created, resulting in a 20-year long war between the Federation and the **Klingon Empire**. **Starfleet** had primarily been an organization of peace and exploration, but it adjusts to the military situation accordingly. For example, starships are no longer designed to carry families.

The standard Starfleet uniform remains essentially the same however; the only significant difference is that all personnel are now equipped with a standard issue **phaser** belt. This medium-width silver band, features a double-buckle shaped in a horizontal version of Starfleet's traditional delta symbol.

Standard design The alternate **Starfleet** uniform of 2366 is still designed using the bold, primary colors of red for command, yellow for security, and blue for the science departments.

◀ The uniforms of this alternate timeline are designed for combat and so incorporate a weapon belt. The captain commands in a more militaristic style.

▲ In wartime, starships no longer carry families and there is a more clipped, military atmosphere on board. Crews are provided with the most basic food provisions, in order to preserve resources for the war effort.

Enlisted crew wear the old-style V-necked all-in-one body suit version of the uniform.

The gunbelt worn by the lower ranks is attached to two thin straps that help to hold it securely in place.

Personnel still wear the communicator, designed in the shape of Starfleet's insignia, on the left breast.

Personnel are provided with standard black ankle boots, practical for wear in the field.

Starfleet Uniforms: Alternate Timeline 2360's

▲ Starfleet security now play a more crucial role than ever. All personnel are equipped with a phaser belt featuring a more powerful looking version of the hand phaser.

▲ Senior officers wear the basic version of the phaser belt, without the silver belt strap hoisted over the right shoulder. The captain's uniform also features black cuffs.

▲ The only member of the U.S.S. ENTERPRISE crew who realizes that the timeline has changed is Guinan. As an El-Aurian, she may have the ability to sense temporal disruptions.

Officers wear shirts with high black collars, and do not have the shoulder straps attached to the gunbelt. The belt itself may be gold or silver.

Weapons Conflict often advances the development of weapons technology and the war of this alternate timeline is no exception.

Starfleet's standard hand phaser significantly changes into a larger, sleeker version of its predecessor.

The only real difference seen in the alternate timeline officers' uniforms is the black cuffs of the tunic sleeves.

A horizontal version of Starfleet's traditional delta symbol adorns the phaser belt's double-buckle.

In this alternate timeline, Starfleet has designed a new hand phaser, that appears to possess a longer, curved handle. Its slightly elongated nozzle looks more lethal than that of its predecessor.

FILE 70 STAR TREK: DEEP SPACE NINE

'The Darkness and the Light'

Major Kira Nerys loses a number of close friends and allies when an unidentified assassin starts to murder former members of the Shakaar resistance cell. Despite being heavily pregnant with the O'Briens' baby, Kira feels she has no choice but to try and track down the killer.

PERSONAL LOG
STARDATE: 50416.2

"I've eliminated three of the suspects from Odo's list. I'm satisfied that none of them could've committed the murders. The fourth name is Silaran Prin – a Cardassian living on a planet near the DMZ."

– Major Kira Nerys.

Major Kira Nerys is saddened to learn that her friend **Vedek Latha Mabrin** has been killed while conducting a religious ceremony at the **Calash Retreat on Bajor**. He was shot by a small **hunter probe**, hidden inside a ceremonial candle holder used to mark the start of the **Bajoran Days of Atonement**. Latha was a member of the same resistance cell as Kira during the **Cardassian occupation**; after years spent as a smuggler and arms dealer, he had found the **Prophets** and embraced a life of peace. It would appear that the violence of his past finally caught up with him.

The mystery of the vedek's death deepens when Kira is sent an unidentified message containing an image of Latha and a single, heavily scrambled phrase – "That's one." **Chief of Security Odo** interprets this as a threat against all the former members of the **Shakaar resistance cell** and steps up security measures on space station **Deep Space Nine**.

Kira, heavily pregnant with the child of **Miles** and **Keiko O'Brien**, feels frustrated that she cannot travel to Bajor and investigate the murder. She is later contacted by **Trentin Fala**, a Bajoran woman who served as an informant to the Shakaar cell throughout the occupation. Fala is petrified that she too may be a target, so Kira offers her sanctuary on **Deep Space Nine**.

Deadly transportation

Commander Worf and **Jadzia Dax**, returning from **Starbase 63** in a **Runabout**, divert to Bajor in order to collect Trentin Fala. The two **Starfleet** officers try to beam her onto their vessel, but she is killed during the transportation process. A postmortem brings to light a **remat detonator** – a device programmed to scramble a **transporter** beam during rematerialization – implanted under Fala's skin. Shortly after, the major finds **Quark** with a **PADD** he came across among a shipment of **Saurian brandy**. It is coded for Kira's attention and bears the chilling communication "That's two." The death of **Mobara**, another former Shakaar resistance member, sadly brings the body count up to three.

Kira's spirits are temporarily lifted when she is joined by her old comrades **Lupaza** and **Furel**. The two battle-hardened freedom

ON SCREEN...

1 At the Calash Retreat on Bajor, Vedek Latha Mabrin commences the Days of Atonement ceremony, only to be killed by a hunter probe hidden inside a candle holder.

2 Odo informs Major Kira of Latha's death. Kira starts to realize that her own life may be in danger when a sinister message appears on her desktop monitor.

3 Trentin Fala, a former informant to the Shakaar resistance cell, tells Major Kira she is terrified someone is watching her. Kira offers her sanctuary on DEEP SPACE NINE.

4 Worf and Jadzia Dax travel to Bajor to collect Trentin Fala, but the Bajoran woman is tragically burnt to death while beaming onto their RUNABOUT.

5 Quark hands Kira a PADD he found in a shipment of Saurian brandy. It confirms that someone is waging a vendetta against members of the Shakaar resistance cell.

6 Lupaza and Furel, two highly experienced members of the resistance, secretly come aboard DEEP SPACE NINE and offer to protect the pregnant Major Kira.

'The Darkness and the Light'

fighters are determined to track down the assassin before any more of their friends are killed. The couple stay in the O'Briens' quarters, keeping a watchful eye over their pregnant friend.

Dax and **Nog** discover that the messages sent to Kira have actually been constructed from her own voiceprint. Before the major can fully take in this information, a bomb is suddenly detonated in the **Habitat Ring**. Despite her condition, Kira rushes to the aid of **Lupaza** and **Furel**, but is too late to save them. Afterward, **Dr. Bashir** has to treat Kira for a placental laceration.

Odo calls in the odd favor, doggedly chases down leads, and finally draws up a list of 25 suspects with a possible grudge against the Shakaar cell. The constable refuses to show Kira the list, afraid she will take the names and go after them. His caution is well-founded, as Kira later beams into Odo's office, accesses his computer, and then departs the station in a *Runabout*.

Kira, having eliminated the first three as suspects on Odo's list, travels to a barren, rocky world close to the **Demilitarized Zone**, home to the **Cardassian Silaran Prin**. She locates Silaran's house – a converted cargo container sitting on a desolate windswept plain – only to encounter a menacing holographic projection of a Cardassian guard. Distracted by the hologram, Kira fails to react quickly enough to a **phaser** shot from a hidden assailant.

Out of the darkness

The major wakes to find herself in Silaran's house, trapped by a powerful restraining field. Her Cardassian captor slowly emerges from out of the darkness and into the light, illuminating the terrible disfigurement of his face and body. Addressing Kira directly, Silaran explains that he was a servant to **Gul Pirak**, commander of the weapons depot outside **Hathon**, during the occupation. When Pirak executed 15 farmers for refusing to display the Cardassian banner outside their homes, the Shakaar resistance cell planted a plasma charge outside the Gul's bedroom window. Twelve Cardassians were killed straight away, including Pirak's entire family; Silaran and 22 others were crippled or injured. Kira refuses to apologize for her actions; she will never forget that the Cardassians were brutal invaders who raped Bajor and killed thousands of her people.

Silaran believes his vengeful campaign will at last bring justice to the guilty, and only the guilty; unlike the Bajoran resistance, he claims to have taken great pains not to harm the "innocent." He even intends to spare the life of Kira's unborn child.

The Cardassian gives Kira a sedative, switches off the restraining field, and then prepares to bring her baby "into the light." Luckily, the major has been dutifully taking doses of **makara herbs** during her pregnancy, and their presence in her bloodstream counteracts the effects of

Silaran's injection. Kira attacks Silaran with the last of her strength, recovers her phaser, and manages to kill her implacable opponent. Soon after, she is rescued by **Captain Sisko** and brought back to *Deep Space Nine* on the **U.S.S. Defiant NX-74205**.

ON SCREEN...

7 *Nog's supersensitive Ferengi hearing proves invaluable when Jadzia Dax sets out to unscramble the sinister messages sent to Major Kira.*

8 *Kira does all she can to try and rescue Lupaza and Furel when a bomb is detonated on the station, but searing abdominal pains cause her to collapse.*

9 *Odo visits Kira in the Infirmary and tells her he has drawn up a list of suspects with a grudge against the Shakaar cell. Kira later goes behind Odo's back to retrieve a copy of the list.*

10 *Kira is taken captive by the assassin, a Cardassian named Silaran Prin. He blames the Shakaar cell for his terrible facial injuries, and now seeks revenge against Kira and the other Bajoran rebels.*

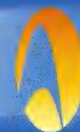

11 *Silaran intends to kill Kira, but has no wish to harm an unborn child. He prepares to extract the baby from Kira's womb and "bring it into the light."*

12 *Kira brushes off the effects of Silaran's sedative and grabs hold of her phaser. She saves her own life, and the baby's, by killing the unhinged Cardassian.*

STARSHIP FACTS

A During her visit to *Starbase 63*, Jadzia Dax challenges Captain Ramirez to a game of no-limit tongo. Dax does not know that Ramirez is a three time-tongo champion, and she ends up owing him two bars of latinum.

FILE 76 STAR TREK V: THE FINAL FRONTIER

STAR TREK V: THE FINAL FRONTIER

Part 2 The Federation is caught unawares when its representative to Nimbus III, along with those of the Klingons and the Romulans, is taken hostage by the exiled Vulcan Sybok. Their best response lies with Captain James T. Kirk and a starship "put together by monkeys."

'STAR TREK V: THE FINAL FRONTIER'

"It's a mystery to me what draws us together. All that time in space – getting on each other's nerves. And what do we do when shore leave comes along? We spend it together."

– Dr. McCoy to Kirk and Spock

Captain Montgomery Scott, chief engineer of the **U.S.S. Enterprise NCC-1701-A**, is unaware of the drama unfolding on **Nimbus III**, the **Planet of Galactic Peace**. He has problems of his own: the new *Enterprise* is in **Spacedock**, the huge starship facility orbiting Earth, but the endless technical faults on its shakedown cruise are driving him to distraction. **Uhura** brings the frustrated engineer some dinner, commenting playfully that they were supposed to be going on shore leave together.

Another problem looms, however: the ship's computer signals red alert, and Uhura receives a message from **Starfleet**. All key personnel are to be recalled to deal with a **Priority 7** situation in the **Neutral Zone**, despite the fact that the ship is "in pieces" with only a skeleton crew aboard. Uhura makes contact with commanders **Pavel Chekov** and **Hikaru Sulu**, who are hiking together on Earth. The pair pretend to be caught in a blizzard rather than admit they are hopelessly lost, but Uhura's sensors indicate sunny skies at their position. She nevertheless takes mercy on them and sends a shuttlecraft to pick them up.

Beans and whiskey

Elsewhere, the camping vacation of **Captain James T. Kirk**, **Captain Spock**, and **Dr. Leonard McCoy** proceeds apace. **Bones** enthusiastically rings a triangle to summon the other two to dinner, and reveals with a flourish a steaming pot of beans on the campfire. Spock approves of McCoy's "old Southern recipe" until he discovers that the secret ingredient is Tennessee whiskey; Kirk asks for a little more of the secret ingredient in his cup.

The three old friends trade humorous quips, and McCoy tells the captain that life is too short for "crazy stunts" such as Kirk's recent mountain climbing. Kirk maintains that he was sure he would be all right – he has always known that he will die alone. McCoy finds it odd that the three of them should take their shore leave together, after all the time they spend getting on one another's nerves on missions, but Kirk points out that other people have families. Spock meanwhile engages in the campfire custom of toasting "marsh melons."

ON SCREEN...

1 On the bridge of the new **U.S.S. ENTERPRISE**, Commander Uhura briefly interrupts Scotty's feverish repair work to bring him some much-needed supper.

2 Chekov and Sulu are recalled to the **U.S.S. ENTERPRISE** by Uhura. Rather than admit they are lost, the pair pretend they have been caught up in a blizzard.

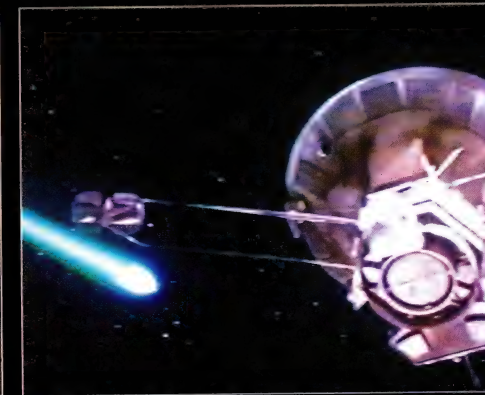

3 Enjoying a camping holiday on Earth, Kirk, Spock, and McCoy settle down to a supper of baked beans, prepared by the doctor to an "old Southern recipe."

4 Spock does his best to observe such old Earth camping traditions as roasting marshmallows and singing the campfire favorite "Row, Row, Row Your Boat."

5 A lone **KLINGON BIRD-OF-PREY**, commanded by the bloodthirsty Captain Klaa and Vixis, his statuesque first officer, drifts through the depths of space.

6 Klaa gets in some target practice by firing off a couple of bursts of disruptor fire at a 20th-century **NASA PIONEER** probe as it drifts through space.

STAR TREK V: THE FINAL FRONTIER Part 2

The other ritual that Spock has learned of is a singalong. The Starfleet officers try to decide on a song, rejecting 'Pack Up Your Troubles', 'Camptown Races', and '**Moon Over Rigel VII**' in favor of 'Row, Row, Row Your Boat'. Spock is unfamiliar with the lyrics, so McCoy and Kirk start off, indicating the right time for him to join in. The **Vulcan** misses his cue, however, as he is attempting to comprehend the meaning of the words. McCoy finally loses his patience, and Kirk suggests they get some sleep. They exchange goodnights, though Spock is still puzzled by the lyrics: life is not a dream.

Out in the depths of space, an ancient NASA *Pioneer* probe from the late 20th century tumbles through space. A **Klingon Bird-of-Prey** decloaks nearby. On the bridge, **Captain Klaa** and statuesque **First Officer Vixis** detect the probe and decide to get some target practice. Klaa sights through a periscope-like viewer and fires off a couple of bursts of **disruptor** fire, destroying the space flotsam. The captain is dissatisfied with such an easy target, but his interest is piqued when the ship is ordered to Nimbus III to deal with the hostage situation created by **Sybok**. The fact that one of the hostages is a Terran means a Starfleet vessel will also be on its way – and that will provide a worthy engagement. The vessel sets course.

Holiday's end

Kirk and the others find themselves in the spotlight – literally – when Uhura brings a shuttlecraft to Yosemite to collect them. She explains that she had to come via shuttle as the **transporter** is offline, and Kirk 'forgot' to bring his communicator. They board the **Galileo 5** and return to the orbiting *Enterprise*. Spock finds time to correct Dr. McCoy about the origins of a quote, prompting the cantankerous McCoy to ask why, if the Vulcan is so familiar with the classics, he does not know 'Row, Row, Row Your Boat'?

Scotty guides the craft in from the shuttlebay control booth using the tractor beam. It is a complex procedure, and the shuttle clears the doors by only a few meters on each side. The engineer goes to greet his captain and the other officers, his grimy appearance indicating the problems with which he has been dealing; Dr. McCoy comments flippantly that he has never seen Scotty happier. Kirk and company get a taste of the ship's continuing malfunctions when the **turbolift** doors close with a horrible grinding sound and the turbocar slurs its announcement.

Nevertheless, they have a mission. Forcing his way through another malfunctioning door onto the bridge, Kirk takes command, ruefully surveying the half-assembled, sparking control consoles. With some difficulty, Uhura patches a transmission from **Starfleet Operations** through to the

viewscreen. **Admiral Robert Bennett** explains the situation on Nimbus III and insists that the *Enterprise* deal with it; there are no more experienced captains than Kirk in the area. His orders are simple: assess the situation, try to avoid a confrontation, and get the hostages back safely.

ON SCREEN...

7 Klaa believes he has found a more challenging target when his **BIRD-OF-PREY** is ordered to Nimbus III to deal with the hostage situation created by Sybok.

8 Kirk, Spock, and McCoy are rudely awakened from their nighttime slumbers by a bright spotlight emanating from Uhura's shuttlecraft.

9 Scotty uses a tractor beam to guide the **GALILEO 5** onto the **U.S.S. ENTERPRISE**, then warmly welcomes his old colleagues aboard their new ship.

10 Kirk and his two companions get a taste of the **U.S.S. ENTERPRISE's** continuing malfunctions when they are nearly trapped inside a turbolift.

11 The **U.S.S. ENTERPRISE** is hailed by Admiral Robert Bennett. He explains the hostage situation on Nimbus III and orders Kirk to mount a rescue mission.

12 Captain Kirk prepares to depart for Nimbus III, aware that the new **U.S.S. ENTERPRISE** is still far from operational, despite Scotty's best efforts.

STARSHIP FACTS

A Scotty at first ignores the red alert signal on the **U.S.S. ENTERPRISE** because it has been malfunctioning.

A Kirk receives his orders from Starfleet Command while wearing a T-shirt emblazoned with the slogan "Go Climb A Rock."

O continued

Ocampa

Delta Quadrant homeworld of the **Ocampa** humanoids, who live in a subterranean society due to the ecological devastation of the planet surface. They were protected by an entity known as the **Caretaker** until 2371. Ocampa have extraordinary, but dormant, telepathic and psychokinetic abilities; notable periods in their nine-year life span are **elogium** (sexual maturity), during which a **mitral sac** develops on the female's back, and **morilogium** (old age). **Kes**, serving on the **U.S.S. Voyager**, was deeply spiritual, and lit traditional **Ocampan** prayer tapers for her beloved **Neelix**, and **Tuvok**, in 2372. (*Starship Log*: 'Caretaker' [VOY]) **SEE FILES 18, 43, 58, 71**

Ocean Planet

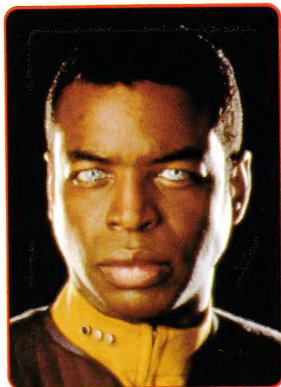

This cohesive liquid spheroid, a concentrated water mass of hydrogen and oxygen in the **Delta Quadrant**, is homeworld to the **Moneans**. A drastic loss of water volume in 2375 was traced to the failure of an ancient field reactor, which had previously ensured planetary containment. (*Starship Log*: 'Thirty Days' [VOY]) **SEE FILES 18, 71**

Oceanus IV

Planet in **Federation** space. In 2368, the **U.S.S. Enterprise NCC-1701-D**'s investigation of the virtually unexplored **Phoenix Cluster** was drastically reduced to accommodate a diplomatic mission to Oceanus IV. (*Starship Log*: 'The Game' [TNG]) **SEE FILES 3, 69**

Ocett, Gul

Female **Cardassian** commander of a **Galor**-class warship in 2369. Ocett's need to solve a four-billion-year-old genetic puzzle required a brief alliance with **Captain Picard** and the **Klingon Nu'Daq** that ended when Ocett opened fire. (*Starship Log*: 'The Chase' [TNG]) **SEE FILES 6, 69**

▲ **Geordi La Forge** was born blind due to a birth defect. By 2373 he had received ocular implants to replace his VISOR.

ocular implant

By 2373, **Geordi La Forge** had replaced his **VISOR** with ocular implants in his eye sockets. The cybernetic technology implants supply the same data as the **VISOR**, minus the face-covering apparatus. **Seven of Nine's** **Borg**-based ocular implant can detect irregularities in the **spacetime continuum**. (*Starship Log*: 'Relativity' [VOY]; *Star Trek: First Contact*) **SEE FILES 43, 66, 71, 79**

Odala

Chief Minister in **Voth** society and head of the **Ministry of Elders**. She was the official to whom **Professor Gegen** presented evidence supporting his **Distant Origin Theory**. Accusing Gegen of heresy, Odala forced him to publicly renounce his work in exchange for her freeing the **U.S.S. Voyager**. (*Starship Log*: 'Distant Origin' [VOY]) **SEE FILES 18, 58, 71**

▲ The **Ocampa of the Delta Quadrant** live beneath the surface of their planet in vast subterranean cities. An ecological disaster rendered the areas above ground uninhabitable.

Odan, Ambassador

This skilled **Federation** mediator and joined **Trill** became romantically involved with **Dr. Beverly Crusher**. En route to a conference in 2367, Ambassador Odan was fatally wounded; **Riker** volunteered to temporarily host the symbiont in order to continue the diplomatic talks. (*Starship Log*: 'The Host' [TNG]) **SEE FILES 43, 46, 69**

'Ode to Spot'

Data's poem honoring his cat, **Spot**, was the ninth composition the android recited during a reading in 2369. (*Starship Log*: 'Schisms' [TNG]) **SEE FILES 43, 69**

Odell, Brenna

Danilo Odell's beautiful, headstrong daughter. In 2365, Brenna had a romantic encounter with **William Riker**, but later opted to help organize a new life for her people on **Mariposa**. (*Starship Log*: 'Up the Long Ladder' [TNG]) **SEE FILES 18, 69**

Odell, Danilo

Leader of the **Bringloidi**. After solar flares left Odell's people homeless, **Captain Picard** mediated an agreement between the **Mariposa** prime minister and Odell that saved both groups. (*Starship Log*: 'Up the Long Ladder' [TNG]) **SEE FILES 18, 69**

Odin, S.S.

This cargo vessel, **Federation** registry **NGL-12535**, was destroyed by asteroids in 2357. Seven years later, the **U.S.S. Enterprise NCC-1701-D** investigated, and three missing escape pods led them to survivors on **Angel One**. (*Starship Log*: 'Angel One' [TNG]) **SEE FILES 18, 69**

Odo

Shapeshifting security chief of **Deep Space Nine**. In 2358, a shapeless form was found in the **Denorios Belt** and placed in a container labeled **odo'ital**, meaning "unknown sample" in **Cardassian**; the name 'Odo' stuck while **Dr. Mora Pol** raised him on **Bajor**. In 2365, Odo rebelled and moved to **Terok Nor**, where **Gul Dukat** made him chief of security. In 2373, an alternate timeline Odo living on **Gaia** sacrificed himself and 8000 others so the love of his life, **Kira Nerys**, could live. Odo reconciled with his own species, the **Founders**, in 2375, saving them from extinction and ending their war against the **Alpha Quadrant**. Odo then left **Deep Space Nine** and Kira to join the **Great Link**. In the **mirror universe**, Odo was a cruel overseer in the ore-processing center and was killed by **Dr. Bashir** in 2370. (*Starship Log*: 'Emissary' [DS9]) **SEE FILES 16, 27, 43, 70**

▲ **Ramsey**, a survivor of the shipwrecked freighter **ODIN** decided to rebuild his life on **Angel One**, but the planet's ruling matriarchy felt threatened by his presence.

▲ The shape-shifting **Odo** believed he was the only one of his kind after he was found drifting in space in 2358. Later, in 2371, he was reunited with his people in the **Gamma Quadrant**.

▲ **Odonia** was mesmerized by the amount of space on the **U.S.S. ENTERPRISE**, as her planet suffered from an overpopulation crisis.

Odonia Native of planet **Gideon**, daughter of **Prime Minister Hodin**. In 2268, Odonia sought to become a role model for her nightmarishly crowded world by contracting **Vegan choriomeningitis**, a disease that would decimate her people. She was saved by **Captain Kirk**. (*Starship Log*: 'The Mark of Gideon' [TOS]) **SEE FILES 18, 68**

Odyssey, U.S.S. **Galaxy-class** starship, registry number **NCC-71832**. In 2370, its commander, **Captain Keogh**, was the first to engage the **Jem'Hadar** while searching for **Benjamin Sisko**. The retreating **Odyssey** was destroyed by a **Jem'Hadar** suicide run. (*Starship Log*: 'The Jem'Hadar' [DS9]) **SEE FILES 31, 70**

Off-Zel, Mark Celebrated artist from **Sirrie IV** who died around 2366. A small vase he created was among **Kivas Fajo's** collection of unique items. (*Starship Log*: 'The Most Toys' [TNG]) **SEE FILE 69**

▶ **Mark Off-Zel's work** was much sought-after by serious collectors.

Offenhouse, Ralph Businessman from late 20th-century Earth. Upon his death, at 55, he was placed in a **Cryosatellite** for later revival. In 2364, he was revived on the **U.S.S. Enterprise NCC-1701-D**. (*Starship Log*: 'The Neutral Zone' [TNG]) **SEE FILE 69**

Officer Exchange Program This **Federation** program puts starship officers from various fleets on each other's ships. Under the program, **Commander Riker** served with the **Klingons** on the **I.K.S. Pagh** and the **U.S.S. Enterprise NCC-1701-D** hosted **Kurn**, **J'Dan**, and the **Benzite Mendon**. (*Starship Log*: 'A Matter of Honor' [TNG]) **SEE FILES 43, 69**

Ogat Training Academy **Klingon** school for future warriors. In 2370, **K'mtar** suggested **Alexander Rozhenko** be sent there to learn how to fight so that he would be able to prevent his father's death in the future. (*Starship Log*: 'Firstborn' [TNG]) **SEE FILES 11, 48, 69**

Ogawa, Alyssa **Starfleet** lieutenant and a senior nurse on the **U.S.S. Enterprise NCC-1701-D**, serving under **Dr. Beverly Crusher**. She was married to fellow officer **Lt. Andrew Powell**, and gave birth to their child in 2370. Ogawa later served on the **U.S.S. Enterprise NCC-1701-E** during 2373. (*Starship Log*: 'Future Imperfect' [TNG]; *Star Trek: First Contact*) **SEE FILES 43, 69, 79**

▶ **Alyssa Ogawa** served as a senior nurse aboard the **U.S.S. ENTERPRISE**.

Ogre of Fire Demonic character in 'The Adventures of Flotter', a series of children's **holostories** that **Naomi Wildman** enjoyed on the **U.S.S. Voyager**. The **Ogre**, a large, disembodied face hurling fireballs, attacked **Flotter** and **Trevis**, and burned the **Forest of Forever**. (*Starship Log*: 'Once Upon A Time' [VOY]) **SEE FILE 71**

Ogus II This planet was visited by the crew of the **U.S.S. Enterprise NCC-1701-D** during a two-day vacation in 2367. Indigenous plant life here includes the **cove palm**. A medical emergency cut short the visit. (*Starship Log*: 'Brothers' [TNG]) **SEE FILES 3, 69**

Oguy Jel This **Bajoran** malcontent was opposed to **Bajor** joining the **Federation**. In 2372, he was arrested for writing on **Deep Space Nine's** walls and received a night in jail and three weeks sanitation duty. (*Starship Log*: 'Crossfire' [DS9]) **SEE FILE 70**

Ohn-Kor **Kesprytt III** village near the **Kes-Prytt** border. In 2370, **Dr. Crusher** and **Captain Picard** escaped from incarceration when a **Kes** operative returned **Crusher's tricorder** updated with a map leading to **Ohn-Kor**. (*Starship Log*: 'Attached' [TNG]) **SEE FILES 18, 69**

Ohniaka III This **Class-M** planet was the location of a **Federation** science outpost where, in 2369, all 274 personnel were killed by the **Borg**. This led to the android **Data** feeling his first emotion – rage – after being manipulated by his brother, **Lore**. (*Starship Log*: 'Descent', Parts I and II [TNG]) **SEE FILES 3, 15, 55, 69**

Oji Female **Mintakan** and **Liko's** daughter. She was in charge of sundial measurements and the keeping of the village records. In 2366, Oji was exposed to **Federation** technology because of a malfunctioning hologram generator. (*Starship Log*: 'Who Watches the Watchers?' [TNG]) **SEE FILES 18, 69**

O.K. Corral The **Melkotians** replicated this 19th-century Earth location, the site of a famous gunfight. They conscripted **James T. Kirk** and the senior **U.S.S. Enterprise NCC-1701** crew into reenacting the deadly blood feud as a means of execution. (*Starship Log*: 'Spectre of the Gun' [TOS]) **SEE FILES 18, 68**

▶ **The Melkotians** recreated a wild west gunfight from 19th-century Earth, with the intention of executing intruding crew members from the **U.S.S. ENTERPRISE NCC-1701**.

Okala **Bajoran** officer serving on **Deep Space Nine**. Okala was working under **Worf** in Ops in 2373 when she detected unusual EM signatures on the hull of **Captain Sisko's Runabout**. (*Starship Log*: 'Things Past' [DS9]) **SEE FILE 70**

O continued

Okalar

A dabo player at **Quark's bar**. He forgot the first rule of the game – “watch the wheel, not the girl” – and lost his considerable winnings while flirting with **Marta**. (Starship Log: ‘The Abandoned’ [DS9]) **SEE FILE 70**

Okinawa, U.S.S.

This **Excelsior-class** starship, registry number **NCC-13958**, was involved in the **Tzenkethi war**. **Benjamin Sisko** once served on the *Okinawa* under **Captain Leyton**. (Starship Log: ‘Homefront’ [DS9]) **SEE FILES 31, 70**

Okona, Thadiun

Charmer, rogue, entrepreneur, and captain of a small cargo ship. In 2365, Okona became the central figure in a bitter exchange that threatened the **Coalition of Madena**, but was later exonerated. (Starship Log: ‘The Outrageous Okona’ [TNG]) **SEE FILES 44, 69**

Thadiun Okona was caught in the middle of a bitter political feud.

Old Crow

Manager of the **London Kings** baseball team when **Buck Bokai** played for them in the 21st century. Whether this was a nickname or his actual name is unclear. (Starship Log: ‘If Wishes Were Horses’ [DS9]) **SEE FILE 70**

Old Ones [1]

The androids of **Exo III** gave their biological masters this name. The Old Ones were later exterminated by their androids, such as **Ruk**, who feared they were to be shut down (Starship Log: ‘What Are Little Girls Made of?’ [TOS]) **SEE FILES 18, 68**

Korob still felt a duty to the Old Ones, the leaders of his planet, but Sylvia dismissed them for never having experienced human physical sensations.

Old Ones [2]

The rulers of **Sylvia** and **Korob's** extragalactic home planet. Sylvia showed contempt for them after experiencing life as a human. (Starship Log: ‘Catspaw’ [TOS]) **SEE FILES 58, 68**

'Old, The'

Large, bound book, designed to edify a human audience, and read by an elderly man in the **Q Continuum**. ‘The Old’ was a direct antithesis of a glossy magazine called ‘The New’. (Starship Log: ‘Death Wish’ [VOY]) **SEE FILES 17, 71**

The Kohms and the Yangs, two warring factions on the planet Omega IV, were culturally similar to the communists and ‘Yanks’ of Earth's past.

olivine

This precious stone is formed as a result of igneous activity. It was discovered inside an asteroid fabricated by the **Etanian Order** and aimed at a **Nezu** colony. (Starship Log: ‘Rise’ [VOY]) **SEE FILES 18, 71**

Olmec figurine

Kurros requested this item from the **U.S.S. Voyager NCC-74656** in exchange for the **Think Tank's** help in escaping the **Hazari**. The figure, from an indigenous Earth culture, belongs to **Chakotay**. (Starship Log: ‘Think Tank’ [VOY]) **SEE FILE 71**

One, The

The Old Ones of Exo III were destroyed by androids such as Ruk when they attempted to deactivate their mechanical servants.

In 2368, Ferengi arms merchant Omag helped the Romulans to acquire parts stolen from the Starfleet surplus depot at Qualor II.

Omega Directive **Starfleet** protocol, known only to starship captains and **Federation** flag officers, involving a potential threat to the entire Galaxy. Omega, the most powerful substance known to exist, was synthesized in the 22nd century by **Ketteract**. A single molecule contains the energy of a warp core; if destabilized, it destroys all matter and a chain reaction could eradicate all **subspace** in an entire quadrant. In 2374, **Captain Janeway** informed her crew that **Omega Molecules** had been detected and they were to use any means to destroy them. (Starship Log: 'The Omega Directive' [VOY]) **SEE FILES 5, 71**

Omega Sagitta system Star system containing the **Coalition of Madena**, a loose and uneasy alliance composed of two **Class-M** planets, **Altec** and **Straleb**. (Starship Log: 'The Outrageous Okona' [TNG]) **SEE FILES 18, 69**

Omega Sector Remote **Federation** region. **Magnus** and **Erin Hansen** embarked from an outpost here around 2364; they headed for the **Delta Quadrant**, where they were later assimilated by the **Borg**. (Starship Log: 'The Gift' [VOY]) **SEE FILES 43, 71**

Omekla III Location of a shipyard that **Thomas Riker** wanted the **U.S.S. Defiant** to head for in 2371, just before **Kira Nerys** caused two plasma conduits to blow. (Starship Log: 'Defiant' [DS9]) **SEE FILE 70**

Omet'iklan **Jem'Hadar** soldier. In 2372, his unit joined with a **Federation** team to destroy an **Iconian gateway**. Omet'iklan was a vicious disciplinarian, and killed his **Vorta** superior for questioning his allegiance. (Starship Log: 'To the Death' [DS9]) **SEE FILE 70**

▶ **Omet'iklan could not understand why Benjamin Sisko declined to kill one of his officers for a minor disciplinary lapse.**

Omicron IV Planet with a pattern of arms escalation mirroring that of Earth's in the 1960's. Omicron IV nearly destroyed itself, but **Gary Seven** helped humans avoid global disaster. (Starship Log: 'Assignment Earth' [TOS]) **SEE FILE 68**

▶ **In 2267, Spock was reunited with botanist Leila Kalomi on the planet Omicron Ceti III. Indigenous alien spores helped Spock to briefly reciprocate Leila's romantic feelings.**

Omicron Ceti III Planet colonized by **Elias Sandoval**, **Leila Kalomi**, and 150 others. **Berthold rays** killed one third of the colonists, but alien spores protected the others. **Spock** felt happiness here in 2267. (Starship Log: 'This Side of Paradise' [TOS]) **SEE FILES 7, 68**

Omicron Delta region This zone of space contains an idyllic world, known as the **amusement park planet**. It was selected for the **U.S.S. Enterprise NCC-1701** crew's shore leave in 2267. (Starship Log: 'Shore Leave' [TOS]) **SEE FILE 68**

omicron particles This extremely rare particle is created only by certain types of matter/antimatter reactions. In 2370, **Jadzia Dax** detected non-random fluctuations in an **omicron particle field**, leading her to encounter the **Yaderans**. (Starship Log: 'Shadowplay' [DS9]) **SEE FILE 70**

Omicron Theta **Data** and **Lore** were created on this planet by **Dr. Noonien Soong** and **Juliana Tainer**. In 2336, the **Federation** colony on Omicron Theta was destroyed by the **Crystalline Entity**. (Starship Log: 'Datalore' [TNG]) **SEE FILES 3, 5, 43, 44, 69**

Omond, Tessa **Starfleet** lieutenant. In a possible future, she accompanied her lover **Chakotay** and **Harry Kim** when they stole the **Delta Flyer** and journey, via **slipstream**, to rescue the **Voyager** of 2375. (Starship Log: 'Timeless' [VOY]) **SEE FILE 71**

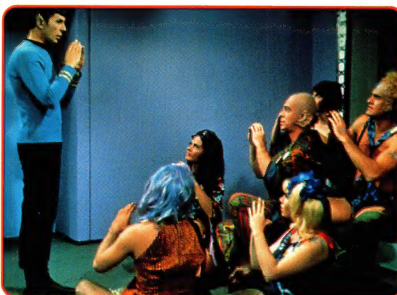

Onara **Bajoran** living on **Deep Space Nine**. In 2372, Onara requested that **Sisko** give his daughter the **Emissary's** blessing at her **ih'tanu** ceremony. (Starship Log: 'Accession' [DS9]) **SEE FILE 70**

▶ **Onaya drew energy from Jake Sisko's latent creativity when she came aboard station DEEP SPACE NINE in 2372.**

Onaya This noncorporeal being was able to assume humanoid form. Onaya subsisted on energy produced by brains engaged in imaginative invention, an activity she deliberately stimulated even though it killed her prey. (Starship Log: 'The Muse' [DS9]) **SEE FILE 70**

"One moon circles" Aliens trapped in a **Tyken's Rift** with the **U.S.S. Enterprise NCC-1701-D** telepathically sent this description of a hydrogen atom – one electron circling one proton. The information helped to free both ships. (Starship Log: 'Night Terrors' [TNG]) **SEE FILES 5, 69**

▶ **Spock could see some logic in 'One,' the philosophy espoused by Dr. Sevrin and his impressionable young followers.**

One [1] **Dr. Sevrin's** philosophy eschewing technology and preprogrammed lifestyles. Sevrin's group was on a quest for the legendary planet **Eden** where, they believed, they could realize their ideals. (Starship Log: 'The Way to Eden' [TOS]) **SEE FILES 58, 68**

One [2] Designation chosen by the unique, **holoemitter**-enhanced **Borg** drone that matured aboard the **U.S.S. Voyager** in 2375. Raised as an individual by **Seven of Nine**, One destroyed a **Borg cube** that attempted to assimilate the ship, then allowed himself to die when he realized he posed a risk to **Voyager**. (Starship Log: 'Drone' [VOY]) **SEE FILES 43, 51, 71**

One, The Leader of a band of self-aware **Borg**. In 2369, **Lore** found the confused Borg and became The One, providing them with tragic direction. (Starship Log: 'Descent', Part I [TNG]) **SEE FILES 55, 69**
